

## Environmental policy

Ever since Blå Station was founded in 1986 the company has been environmentally aware by working to seven + one criteria for long-term sustainable development. This means that we only use high quality materials that are recyclable and renewable whenever possible. Each item of Blå Station furniture should deserve a place in the market. This means, for example, that the design quality should be so high that the furniture will be attractive in the market for a long time to come. Furniture that you like and can use your whole life needn't be replaced – which is good news for the environment. We use carefully selected manufacturing techniques and aim to optimise our transport. The fact that all our furniture is made in Sweden makes it easier for us to check the entire manufacturing process from product idea to delivery to customers; as a result, it is easier for our customers to make an environmentally aware choice.

**Blå Station** shall constantly aim to implement environmentally beneficial measures at all levels in the company and actively try to influence our suppliers, customers and other partners to become more environmentally aware.

All **Blå Station's** activities shall be permeated by a level of environmental awareness that is based on a balance between what is environmentally justified, technically feasible and economically reasonable.

**Blå Station** shall comply with existing environmental legislation, regulations and other requirements that affect the company in applicable markets. **Blå Station** shall also prevent emissions of environmentally harmful pollutants whenever possible.

**Blå Station** shall strive to achieve environmental efficiency in all our products and, openly and clearly, report available information about our products' environmental impact.

As far as technically feasible and economically viable, **Blå Station** shall minimise its raw-material consumption, transport and energy consumption.

Blå Station's environmental policy reflects our current position and our visions for the future. We continually revise and update our environmental policy to ensure that we constantly set ourselves new goals. We use an environmental management system according to ISO 14001 to guarantee that we perform effective and well-structured environmental work.
